Short introduction to our sponsors ECL euro.COURIER and Seidel Werkzeugbau.

UP-TO-DATE WITH RACETECH

Dear sponsors, friends and supporters,

we were successful with our membership recruitment at the beginning of the season and would like to report it to you here.

In order to strengthen the cohesion in the team, we set out to a weekend trip in mid-November and experienced some eventful days together.

Starting with this newsletter we would like to introduce some of our sponsors over the coming editions. Thereby we start with two of our first class sponsors: ECL euro.COURIER and Seidel Werkzeugbau.

But now we hope you enjoy reading!

MEMBERSHIP RECRUITMENT

At the beginning of the current winter semester, we once again did a lot of advertising to inspire students to join our team.

We were especially active at various freshmen events and presented our RT14evo. However, we were not only able to score with the freshmen: We could also welcome some students from higher semesters to our info evenings and got them on board for our project.

Thus we were able to start the season with an enlarged team and new motivation.

SUPPORT BY THE FOUNDATION OF TUBAF

The Foundation of the TU Bergakademie Freiberg supports the Racetech Racing Team now for the fourth time with a donation.

Therefore, we would like to thank them for their financial support!

The received financial means will be used mainly to finance material.
We hope for a good cooperation in the future.

TEAM WEEKEND

This season, we welcomed many new members to the club. So we packed them up on November 18 and went to Geyer - to get to know each other at our first team weekend.

Arriving there in the early evening, we started exploring the group house and cooked. We spent the rest of the evening playing games, building towers out of wooden spoons and telling funny anecdotes about ourselves to strengthen the team spirit.

On Saturday morning we woke up to a freshly snow-covered winter landscape. We had to take advantage of this for a hike through Geyer. So we went from the accommodation to the Binge, through the Greifenbach valley, past the Greifensteine, after which we reached the Greifenbachstauweiher. Exhausted, but satisfied, we arrived back after about 6 hours. After a rest we enjoyed dinner together. The rest of the day we spent with mulled wine and stick bread at the campfire, as well as some games, including interesting dance performances of some members.

Sunday was the day of departure. With new friendships and experiences in our pockets we started our way home in the afternoon. We owe this also to the group house Geyer, but especially to the new members. Fully refueled with motivation, we can now take off in the new season.

ECL EURO.COURIER

When supply chains break...
the chain menders of euro.COURIER step on the plan!
Empty shelves, eternal waiting times, inflation, no deliverable raw materials. The usual paths are partially no longer usable today. That's why we at ECL euro.COURIER Logistics GmbH are more important than ever as "supply chain patchers":

When it comes to transport issues, we are deadline savers with diligence and many years of experience. Euro.COURIER was founded in 2000 and since then we have stepped in when plans threatened to fall through.

We focus on special speed logistics, special and direct transports, overnight express and emergency logistics. Whether it is a standing order or a one-off solution, we take our job to heart. Shipments are carefully monitored and delivered directly to the recipient. State-of-the-art fleet and storage facilities round off our understanding of good logistics.

Put us to the test!

With foresight and know-how, we stand firmly by your side to solve your problems.

SEIDEL WERKZEUGBAU

Seidel Werkzeugbau GmbH is a company in the region of Central Saxony, from which we have been supported since the beginning of our association history and thus maintain a close relationship with them.

With their diverse manufacturing processes, they provide us with, among other things, complex parts, which are turned, milled, eroded or water-blasted. This season, for example, they are manufacturing parts of our backlash-free steering gear made of titanium, as well as precise chassis connections in our monocoque. But the company also manufactures tools, special machines and special spare parts, and offers services and trade in relevant products.

Their very fast way of working and their reliability has already solved some problems for us and makes Seidel a main sponsor for us since day 1, for which we would like to say "Thank you".
